UsabilityTest

Sandwico development team

June 2019

1 Tasks

The following tasks will test the usability of the Real-time FER web system.

1.1 Home page

1. On the currently displaying page, investigates which users you currently have in the system.

2. Determine which building floors are currently saved in the system.

3. Check what users you currently have in the system for another building, "Building2".

4. Perform the actions that will help you to find a specific user that is saved in the system for "Building2" (no input is required)

5. Play the simulation.

1.2 Administration page

1. Navigate to the Administration page to explore more functions.

2. Open the edit window for the user with the name John Moe.

3. Move the user John Moe to "Building2".

4. Save the changes you made.

5. Check to see if John Moe has been moved to "Building2".

6. Open a new window to add a new user to "Building1".

7. Pretend you filled in the details, send the request to that user.

8. For the building "Building1" find the second floor and view its plan.

9. Investigate the information about "Building2".

10. Go back to the home page

1.3   Simulation page

1. Change the settings for simulation by adding fire at specific coordinates(no actual input is required). Place the fire on the second floor.

2. Change building so that simulation will be played for another building.
