UsabilityTest

Sandwico development team

June 2019

1 Tasks

The following tasks will test the usability of the RTFE web system.

1.1 Home page

- On the currently displaying page, investigates which users you currently have in the system.
- Determine which building floors are currently saved in the system.
- Check information about the current selected building.
- Check what users you currently have in the system for another building, "Building2".
- Perform the actions that will help you to find a specific user that is saved in the system for "Building2" (no input is required)
- Play the simulation.

1.2 Administration page

- Navigate to the Administration page to explore more functions.
- Open the edit window for the user with the name John Moe.
- Move the user John Moe to "Building2".
- Save the changes you made.
- Check to see if John Moe has been moved to "Building2".
- Open a new window to add a new user to "Building1".
- Pretend you filled in the details, send the request to that user.
- For the building "Building1" find the second floor and view its plan.
- Investigate the information about "Building2".
- Go back to the home page

1.3 Simulation page

- Change the settings for simulation by adding fire at specific coordinates(no actual input is required).

- Change building so that simulation will be played for another building.
